

# MQSeries OS/390 System Administration

## Table of Contents:

- Overview
  - Who Should Take This Course
  - What You Are Taught
  - Topics Include
  - Prerequisites
- Duration: 4 Days  
Delivery Method: Classroom  
Skill Level: Intermediate  
Audience Type: Public/Private  
Language: English

## Overview:

Learn how to install, customize, operate, and administer MQSeries for OS/390 and MQSeries for MVS. Topics include configuration, day-to-day administration, recovering from problems, and managing security and performance. The course is taught using MQSeries for MVS for OS/390 V2.1. This course helps you prepare for MQSeries Installation and Configuration (test 095) to become an IBM Certified Specialist - MQSeries and MQSeries System Planning and Design (test 096) to become an IBM Certified Solution Expert - MQSeries.

## Who Should Take This Course:

Technical support personnel responsible for the successful implementation, operation, and day-to-day administration of the MQSeries product on OS/390 and on MVS/ESA.

## What You Are Taught:

- Install and configure MQSeries for OS/390 and MQSeries MVS/ESA
- Describe the role of the MQ administrator
- Perform day-to-day administration tasks
- Add and modify MQSeries resource definitions
- Ensure successful recovery after system failures
- Use MQSeries supplied documentation to supplement the knowledge gained in this course

## Topics Include:

- Installation and customization
- The job of the MQ administrator
- Resource definition
- Recovery
- Security
- Performance and problem determination
- MQSeries clients

## Prerequisites:

You should have completed Technical Intro to MQSeries (MQ010) and have a general understanding of the operation and use of OS/390 and/or MVS/ESA.
